

**LEIGHTON O'BRIEN**

# Those who know the benefits of **centralised tank network management** know Leighton O'Brien.

Developed and enhanced in cooperation with some of the most famous oil brands around, Leighton O'Brien is the modern version of SIRA - centralised, daily and a keystone component of effective tank management.

Used successfully on tens of thousands of tanks, Leighton O'Brien's daily centralised network management sits as a part of Leighton O'Brien's

unique comprehensive network management solution. When used in conjunction with Leighton O'Brien's installation integrity tests and Leighton O'Brien's EPA compliance testing, Leighton O'Brien can follow, manage and document your tanks performance from cradle to grave.

By adopting Leighton O'Brien to watch over their storage networks, our clients have added millions of dollars to their bottom line. No one knows more about centralised integrity management than Leighton O'Brien.

Done Daily, Done Centrally, Done Right - Leighton O'Brien raises the bar on centralised daily leak detection and network management.

## Leighton O'Brien delivers:

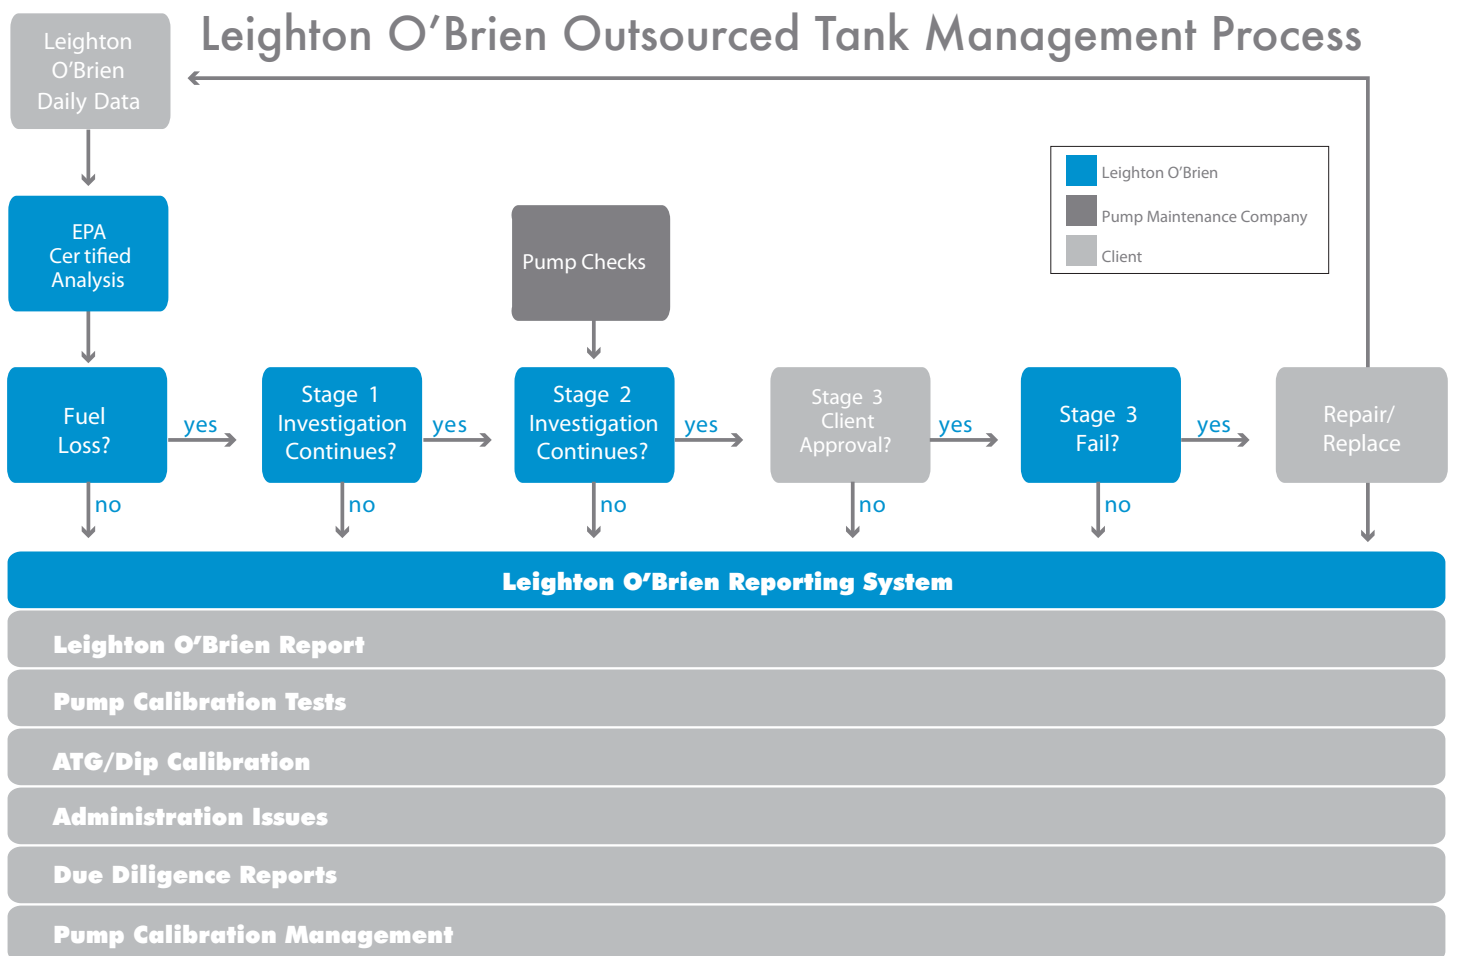

- Centralised control of a large storage network on a daily basis
- Lower network level fuel losses through daily detection of leaks
- Statistically directed maintenance spend for dispensing pump calibrations
- Quick and effective loss investigations
- Enhanced EPA compliance
- Comprehensive online reports

# Leighton O'Brien provides comprehensive centralised leak detection and network management

## Leighton O'Brien Outsourced Tank Management Service includes the following:

- US EPA Accredited Statistical Inventory Reconciliation
- Daily Black Flag Reports for high loss tanks
- 80 Mathematical Algorithms applied to tank systems
- Comprehensive web based reports
- Product Loss Investigation Management:
  - Stage 1: Administration audit
  - Stage 2: Pump calibrations and visual inspections
  - Stage 3: Leighton O'Brien precision testing
