Danny,

WA will accept Dri-sump testing. We don't approve or deny UST technology, tank components, testing methods, etc., instead we rely on NWGLDE and other third parties to conduct the research.

I do have one question, are you or someone from your company available to give a demonstration or presentation to the WA UST inspectors? All the UST inspectors get together twice a year and I try to include at least one outside mind in these meetings to help increase the knowledge base. This is new so I am sure they will have a bunch of questions.

Regards,

Kris
