Danny,

Since this method is listed by NWGLDE, it can be used in Utah. However, the person performing the test must be a Utah Certified UST Tester.

The process for initial certification is as follows:

- submit documentation of training in this equipment and any other equipment you will be using as a UST Tester.
- submit both the initial UST Tester and proof of citizenship applications (found here: <https://deq.utah.gov/environmental-response-and-remediation/certification-underground-storage-tanks-ust-program>)
- your employer must sign the financial assurance agreement on the application and submit a copy of their certificate of insurance.
- submit a check for the \$225 Certification fee
- take the UST Tester certification exam. Exams are given first and third Tuesday of every month in our office in Salt Lake City.

If you have any questions, please let me know.
